

As soon as my Professional Year program was over, I started my internship as a Junior full stack developer **at Rebb Tech PTY.LTD Rockdale**. I got a very good chance to apply my knowledge to the real-life work industry. I am getting more and more industry-ready as my skills, techniques, and experiences have been sharpened here at the internship. After Module 1 at my Professional Environment contents, I now have a very good understanding of what being professional means in real-world projects. This internship has given me a chance to work more on my hard skills allowing me with adding soft skills every day. I also came to realize that soft skills are also the key to unlocking many paths in our careers.

How to present a valuable presentation in the workplace, how to engage the audience while presenting professionally, documenting our work, commitment to learning more, communicating and engaging with teammates and colleagues are the most common things that I've learned from Module 1 and internship so far. I also feel very lucky and motivated I get the chance to use new tools and technologies every day at Rebb Tech. In addition, at my internship, client and their deliverables communication skills have been one of my all-time favourite add-on skills. This will probably help me stand out as a professional person in the future.
